Personalised inspiration: Zalando Assistant

Available in 21 languages to all our customers

>9m

customers already engaged with Zalando Assistant in 27 markets

Enablers

Proxy

- vendor & model independence
- tool flexibility
- central entry point for all Builders
- control the tool sprawl

LiteLLM Extensibility: Hooks

- forced prompt caching
- forced client version upgrades
- tiered model access
- anonymized usage stats
- model upgrades

Enablers

Growing ecosystem - platform & cross-team inner source

Agent Platform
kagent, agentgateway

self-extending LLM wiki
per business unit

Agentic Identity Broker

skill marketplaces
(company, domain, team)

Enablers

Agentic Identity Broker

- Identity infrastructure for agents that act on a user's behalf
- Token vault + Token exchange at the edge, RFC8693
- OSS by Zalando (agenticidentitybroker.dev)

AI Impact

Renovation & Migrations

- fleet-wide migrations with AI transformation (skill-based)
- skill-assisted framework upgrades
- skill-assisted platform feature adoption
- centrally enabled large-scale AI-assisted migrations
  (e.g. 44% effort reduction on data migration - ~50 pipelines, ~200 data objects)

AI Impact

Code & Reviews

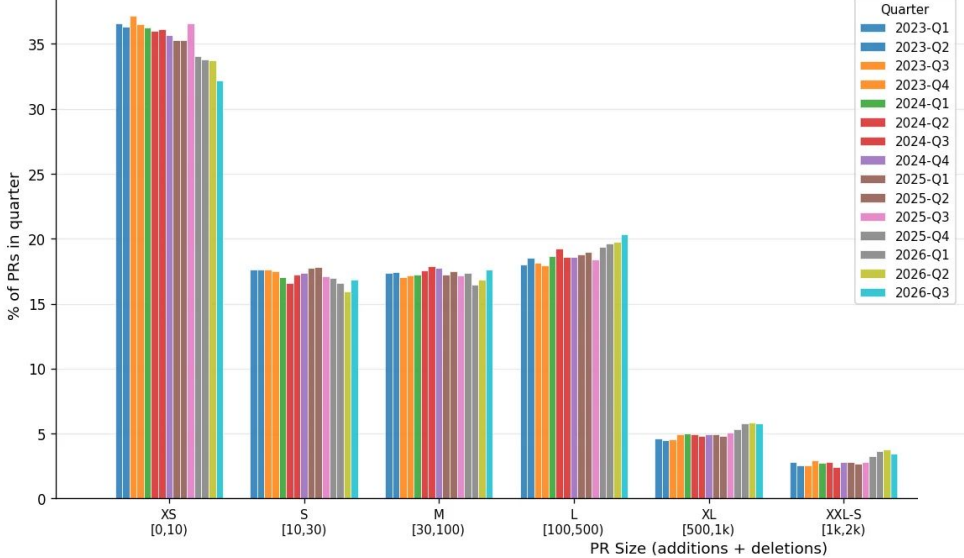

AI code footprint

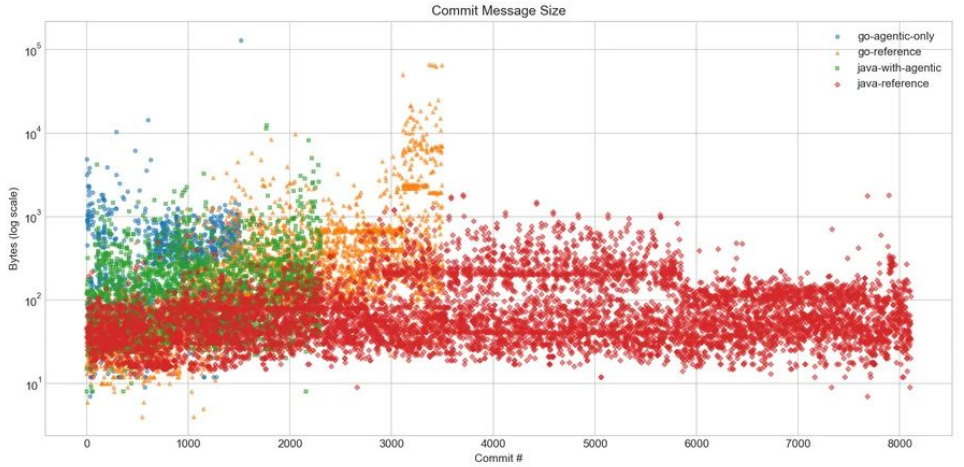

larger PRs

growing
[100,500) & [500,1k]
LOC buckets

1-2 OOM

larger commit messages
100-10000+ chars
instead of 10-1000

Own AI PR risk scoring

33% PRs
are low risk

20-40%
lower lead time
if merged by author

PR Guide in Linear

Choose a spend estimate

01 / 04 Reviewed

The `--cost` option now selects API spend or a local estimate, while no value still selects the API; see the option and dispatch.

cli.py src/zllm +14 -7

Estimate local spend

02 / 04 Reviewed

Local estimates use codeburn to read session data, and Bedrock profile aliases map profile identifiers to readable model names.

The command tries available codeburn launchers, sets those aliases, then displays the monthly estimate.

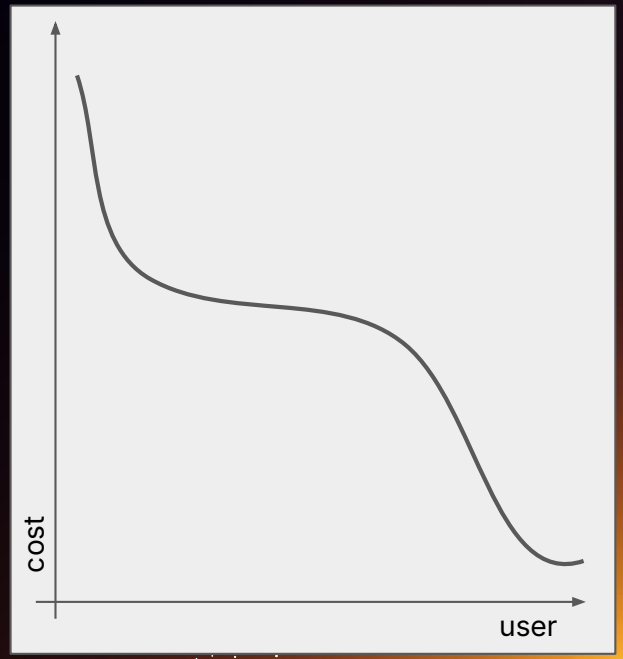

Why pin codeburn to 0.9.25?

commands.py src/zllm +115 -2
